

PassTime Announces TRAX 4: Its Newest Version GPS Tracking Solution

LITTLETON, Colorado— October 2, 2015—PassTime® announced today that TRAX 4 – the fourth version of its popular GPS tracking system – has been released. TRAX 4 boasts an all new design and a smaller form factor. TRAX was first introduced in late 2010 as an easy to use GPS tracking solution. Now in its fourth version, the platform continues to be a widely successful piece of PassTime’s product offering.

“PassTime continually works to bring our customers new and innovative products. TRAX 4 is an update to an already great product-with a smaller size and some new features. We think our customers are really going to like it,” said Stan Schwarz, founder and CEO of PassTime.

PassTime, which has been in business for over twenty years, manufactures and sells GPS devices used for subprime automotive lending, theft-recovery, and vehicle fleet markets. In the auto finance market, PassTime devices are used by lenders to help assist with timely payment involving consumers with subprime credit. It also offers consumer theft-recovery devices used by customers to help locate their vehicle with GPS in the event of a theft.

TRAX 4 is available and shipping now. For more information about TRAX 4 or PassTime, please call 877.727.7846 or email info@passtimeusa.com

About PassTime

PassTime provides GPS-based technology solutions serving the auto finance, fleet and vehicle theft recovery industries. Headquartered in Littleton, Colorado, PassTime was founded in 1992; PassTime revolutionized the automotive finance industry with the creation of its first Automated Collection Technology (ACT) product in 1997 designed to improve customer payment performance and reduce default and repossession risks. The PassTime suite of products has evolved to include GPS tracking, wireless ACT, theft recovery, and fleet solutions. PassTime prides itself on providing high quality, reliable products matched with a 24/7 Live Customer Support center. Today, PassTime’s innovative products are used by thousands of automotive lenders and dealers, fleets, and consumers.
